

Spot leaks, save water, reduce risks

Invest in a data collection device and reduce financial and operational risk to your business

Regular, accurate data makes it easier to monitor your business' water consumption and identify any leaks or irregularities more quickly. As well as saving water, this can help your business avoid financial and operational risks. As you know, the quicker you're alerted to any unexpected usage, the more effectively you can manage and resolve the issue with the help of our leak detection services.

The benefits of data collection devices

Manually checking your water meter on a daily, weekly or monthly basis and submitting meter reads isn't feasible for many businesses so issues can often go unnoticed. To help businesses like yours keep track of their water usage and receive more accurate bills, Wave offer a range of data collection products to suit most budgets and requirements.

Although each device is different, all offer regular, automated meter reads and alert you if your water consumption increases. The table below explains more about the data collection products we supply as part of Active Water Management.

We discuss your requirements and understand how your business works. Then we'll set everything up for you!

More accurate billing

No need to worry about sending us regular reads. Each month they'll be uploaded straight into our system, so your bills will be more accurate.

Track your usage

With regular consumption data at your fingertips, you can quickly spot any issues or unexpected changes in your usage.

In the know

If your consumption increases significantly, you'll know about it, quickly.

Safety first

It's not always safe or easy to read your water meter. With an AMR it's read for you, regularly.

Interested in our data collection services?

If you think a data collection device would benefit your business, speak to your Account Manager or email valueaddedservices@wave-utilities.co.uk with the following information:

- 💧 Meter serial numbers or SPIDS for the meters you would like the device installed on
- 💧 The contract term you would like
- 💧 How would you like to pay for the device

A member of our team will get back to you to discuss your options.
