

# Save water and money

Although we're living on a blue planet, only around 1% of the earth's water is available for us to use. If we don't stop wasting water, in just 20 to 30 years there won't be enough to go around.

By using a flow bag to check how efficient your taps and shower heads are, you can make sure you're using water sustainably, minimise waste and ultimately save money on your bills.

## How to use a flow bag

**1.** Place the bag under your tap or shower head

**2.** Turn the water on full for five seconds then turn it off

**3.** Read the bag and see how much you could save

The flow bags are reusable and biodegradable and can be used to test as many fittings as you like.

## Make a change

You can purchase an eco-friendly shower head for £20, which on average will save you around £53 a year. You'll save on your gas too, as 12% of a household energy bill comes from heating the water for showers, baths and the kitchen tap!

### Share your results

We'd love to know how much you could save by switching. Let us know through our short survey.
